

# Code Highlighting

This example demonstrates syntax highlighting with the Monokai theme.

## Highlight Themes

Change the theme with `code_block_style`:

```
code_block_style: monokai
```

Available themes include: `github`, `monokai`, `vs`, `atom-one-dark`, `dracula`, and `many more`.

## JavaScript

```
async function fetchData(url) {  
  const response = await fetch(url);  
  const data = await response.json();  
  return data;  
}  
  
const users = await fetchData('/api/users');  
console.log(users);
```

# Python

```
from dataclasses import dataclass
from typing import List

@dataclass
class User:
    name: str
    email: str
    active: bool = True

def get_active_users(users: List[User]) → List[User]:
    return [u for u in users if u.active]
```

# TypeScript

```
interface Config {
    theme: string;
    format: 'A4' | 'Letter';
    margin: number;
}

function createPdf(config: Config): Promise<Buffer> {
    return new Promise((resolve) => {
        // Generate PDF ...
    });
}
```

# Bash

```
#!/bin/bash

for file in *.md; do
    mdforge "$file"
    echo "Converted: $file"
done
```

# SQL

```
SELECT users.name, COUNT(orders.id) as order_count
FROM users
LEFT JOIN orders ON users.id = orders.user_id
WHERE users.active = true
GROUP BY users.id
HAVING order_count > 5
ORDER BY order_count DESC;
```
