

Font Presets

This document uses the classic-elegant font preset.

Using Presets

Simply specify a preset name:

```
fonts: classic-elegant
```

Available Presets

Preset	Heading	Body	Mono
modern-professional	Inter	Inter	Fira Code
classic-elegant	Playfair Display	Libre Baskerville	Fira Code
modern-geometric	Poppins	Open Sans	Fira Code
tech-minimal	Space Grotesk	DM Sans	JetBrains Mono
editorial	Cormorant Garamond	Libre Baskerville	Fira Code
clean-sans	DM Sans	Inter	Fira Code

Theme Font Presets

Each theme has matching fonts (system fonts with Google Fonts fallbacks):

Theme	Heading	Body	Mono
<code>beryl</code>	—	Noto Sans	Fira Code
<code>tufte</code>	—	Palatino → EB Garamond	Consolas → Inconsolata
<code>buttondown</code>	Helvetica Neue → Inter	Georgia → Gelasio	Courier New → Fira Code
<code>pandoc</code>	—	Georgia → Libre Baskerville	Consolas → Fira Code

System fonts are used when available; fallbacks (after →) are downloaded from Google Fonts.

Custom Fonts

Specify individual fonts from Google Fonts:

```
fonts:
  heading: "Playfair Display"
  body: "Source Serif Pro"
  mono: "JetBrains Mono"
```

You can specify just what you need:

```
fonts:
  heading: "Poppins"      # Others use theme defaults
```

Code Example

Here's some code to show the mono font:

```
function greet(name) {  
  console.log(`Hello, ${name}!`);  
}
```

How It Works

1. Fonts are checked against your system fonts first
2. If not installed, downloaded from Google Fonts
3. Cached in `~/.cache/mdforge/fonts/` for future use

Fonts are set as CSS variables that themes use:

- `--font-heading`
- `--font-body`
- `--font-mono`

Combining with Themes

Fonts work with any theme:

```
theme: tufte  
fonts: tech-minimal    # Override tufte's default fonts
```
